# Giant Flowered and Large Flowered Hyacinths

At the top of the list of flowers grown from fall planted bulbs.

Hyacinths are probably the easiest flowers to grow in the house during the winter or early spring! Equally effective in beds, borders or irregular groups here and there among perennials, in combination with pansies, forget-me-nots, English daisies, arabis, aubrieta and hardy alyssum, or in front of shrubbery. We offer the best varieties in a full color range.

**GIANT BULBS FOR GIANT SPIKES** The spikes produced from Burpee's Giant Size Bulbs will be truly giant and well filled with large flowers. Our giant bulbs are carefully selected, of highest quality, and particularly desirable for beds, pots or glasses, where largest spikes are wanted. For forcing, plant only one variety in a pot.

**LARGE SIZE BULBS FOR LARGE SPIKES** The spikes produced from Burpee's Large Bedding Size Bulbs will be a little smaller than the Giants, but will be just as pretty; the selection of varieties is the same. Many gardeners prefer Burpee's Large Size Bulbs because of the saving in price. They will make a fine showing.

# Incomparable Medium Trumpet Daffodils

The largest "red-crowned" varieties are in this group.

Incomparable Daffodils are certainly well named. They are most showy, truly spectacular and sure to elicit admiration wherever seen. Trumpets vary in size and shape according to variety. Where trumpet is greatly reduced in size and cupped, we refer to it as a "cup" and where it is shortened but expanded we call it a "crown". The trumpet is the funnel-like center, the perianth the surrounding row of petals. Trumpets, crowns or cups of many varieties are strikingly edged in varied shades of orange from light to brightest scarlet-orange and measure from one-third to a little less than the length of the perianth. The colors are brightest when flowers are grown in semi-shade. They are highly recommended for exhibition.

## DAFFODILS AND NARCISSUS

In a general way, daffodil and narcissus mean the same thing; daffodil is the common name and narcissus the botanical name. Common usage among garden makers in this country has applied the term daffodil to the giant trumpet varieties, while the smaller or medium trumpet, as well as the cluster-flowered and poet's types, are referred to as narcissus. Botanically, these smaller or medium trumpet daffodils are the incomparable, poeticus, poetaz, polyanthus and miniature types. To avoid confusion, we are listing all of these as daffodils.

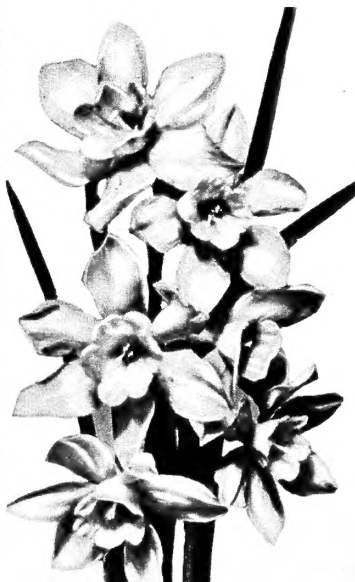

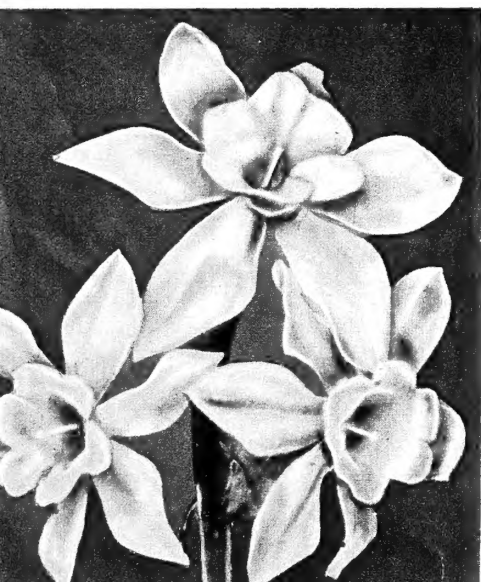

6 Bulbs of the same variety may be ordered at ½ the 12 rate; 25 or more, same variety, at the 100 rate.

## DAFFODILS ARE SO EASY TO GROW!

**Outdoors:** Plant bulbs as early in the fall as possible, 4 to 8 in. deep and 6 to 10 in. apart; the exact distances depend on the size of the bulb and the nature of the soil. In very cold locations, after the ground is frozen hard, cover with leaves, straw or coarse litter to a depth of 4 to 6 in. to prevent alternate freezings and thawings during the cold months.

**Indoors:** Put several bulbs, about 1 in. apart (same variety) in a pot, barely cover the bulbs with soil, water thoroughly and put in coldframe or heel-in in the garden for 8 to 10 weeks to force root development before bringing indoors for winter blooming. Full cultural directions for planting and care are printed on bags containing Burpee bulbs.

Daffodils are unexcelled for naturalizing in gardens or landscape 5

## Showy Double Flowered Daffodils

## Paper White & "Yellow Paper White" Polyanthus Narcissus

Popular for growing in the house.

One of the easiest flowers to grow. To have a continuous display, make successive plantings two or three weeks apart. We suggest you order enough bulbs early, as they will keep in perfect condition if put in a cool, dry place until needed for planting. After flowering, the bulbs should be discarded and new ones purchased next fall. Ours are large, firm bulbs that give best results.

**Water Culture:** Put an inch or two of sand or pebbles in bottom of dish; set the bulbs upright and place sufficient pebbles around them to hold them in place. Fill dish with water and set in a dark, cool room until plenty of roots have formed, after which bring to a light but cool, free from frost, place. May also be grown in soil. **They are not suited to garden planting** except in frostless localities.

### 7187 Paper White Grandiflora

The large, pure white, sweet-scented blooms are borne in clusters and are highly prized for their beauty, fragrance, and the ease with which they can be grown. This accounts for the universal popularity of Paper Whites for indoor decoration during winter.  
3 for 45¢; 12 for \$1.50; 100 for \$10.00

### 7188 Soleil d'Or—Golden Yellow Narcissus

Often called the "Yellow Paper White," the sweet-scented blooms being rich golden yellow with a deep orange-red cup. May be grown, like Paper Whites, in water and pebbles, but do best grown in soil. Full cultural directions are on each bag.

## Early Species Hybrid Tulips

Spectacular for garden and cutting. Long lasting.

Hybridists have crossed the popular Fosteriana species tulip, found growing wild in Bokara, with the best of the longer stemmed, larger flowers of other tulips, with the result that Fosteriana hybrid flowers are extremely large, extremely early with spectacular flowers borne in April on stiffly erect stems from 10 to 18 in. tall depending on variety.

**7584 Burpeeana** An outstanding, new, species hybrid, long petaled, bright vermilion flower flushed fiery orange and enhanced by a showy, rich golden yellow base. It is one of the first of this group to bloom. Produces a most striking effect. Another virtue of this wonderful tulip is its strong, stiffly erect stem. Grows 16 in. tall. 3 for 40¢; 12 for \$1.40; 100 for \$10.00

**7585 Golden Emperor** New golden-yellow companion to Red Emperor and White Emperor. The three colors planted together are a gorgeous sight. 18 in. tall. 60¢ each; 3 for \$1.65; 12 for \$5.75

## Chameleon Tulip

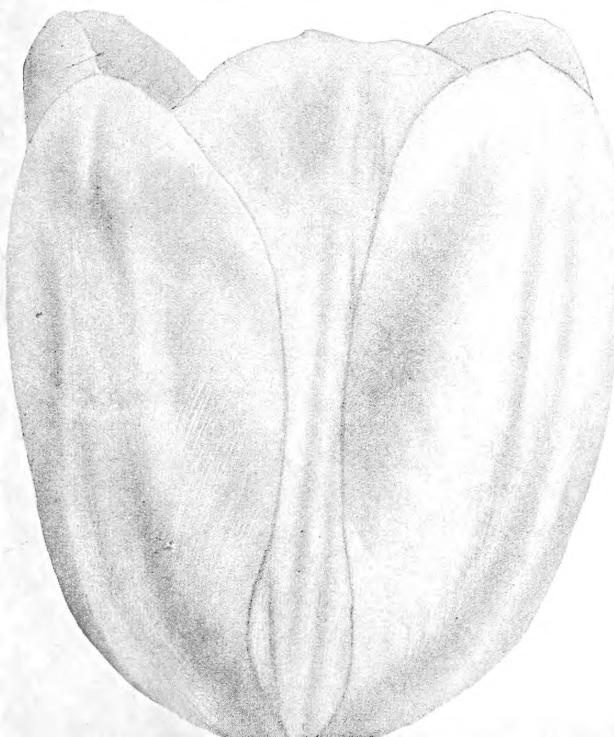

Color changes from day to day. May flowering.

**7560 Pink Wonder** In shape and habit of growth, it resembles the Darwins, but the coloring reminds you of the Cottage Tulips. Rather than list it with either class, we are keeping it separate so you will not miss it. When first opening, the flowers are white with faint red or pink markings on edges of petals. As flowers age the pink or red suffuses over entire surface so that the coloring changes from day to day, hence the appropriate name "Chameleon." Its ever-changing coloring is a constant delight and creates a lovely effect in the garden or as cut flowers. Flowers in May outdoors; can be forced for blooming indoors in February.

## Chinese Lantern Tulip

Glow with an iridescent sheen like a lighted Chinese Lantern.

**7561 Good Gracious** This tulip is so distinct that instead of listing it with the Cottage or May Flowering group we are offering it separately so it will not be overlooked. Flowers are of good size, globular and glow with such an iridescent sheen as to create the effect of a delicately colored, lighted Chinese Lantern. The color is rather difficult to describe: a glorious combination of pink, salmon, orange and yellow gives the general effect of brilliant orange; inside is a brighter orange with a contrasting yellow base. Superb for any planting and valuable for cutting. 25 in.

3 for 60¢; 12 for \$2.20; 100 for \$15.00

### HOW TO GROW TULIPS

**Outdoors:** Tulips should not be planted in soil in which they had been grown the last two seasons. Select a new location in a sunny position. Do not use fresh manure at planting time; well-rotted manure or bone meal may be worked into the soil which should be well drained. Plant bulbs 5 to 6 in. deep and 6 to 8 in. apart.

**Indoors:** A mixture of ¾ good clean garden soil and ¼ leaf mold to which a little bone meal has been added will give the best results. A 6-inch pot will hold about 6 bulbs. Place bulbs about 1 in. apart each way. Cover with an inch of soil and water thoroughly; then put pots in a coldframe or heel-in in the garden for 8 to 10 weeks to force root development. Bring pots indoors, first in a cool location and gradually to the average living room temperature.

# Ever-Popular Giant Darwin Tulips

Especially showy in beds, borders or in groups among perennials.

The chief characteristics of Giant Darwin Tulips are the attractively shaped flowers, tall stems, and lovely colors—scarlet, crimson, rose, pink, violet, purple, slaty blue, blue-violet, lavender, white, golden yellow, etc. Nothing could be lovelier for cutting. Wonderful when planted in masses or in drifts of twelve or more.

If the widest assortment of colors is desired in late tulips, the Giant Darwin, Ideal Darwin, Lily Flowered, Breeder and Cottage varieties should be included in your plantings, as each class has its own range of colors, and all usually bloom during May. The height given for each variety is average and some variation is natural in different localities and seasons. We offer a choice selection of better varieties.

## Cottage or May Flowering Tulips

Bloom in early May. Rich in delicate, artistic shades.

The term "Cottage" is of recent origin, and so called because so many were planted around the country homes and cottages of England. As a class, they are rich in the more delicate and artistic shades of yellow, orange, fawn, salmon, old rose—colors missing to a great extent in other late tulips.

## Orchid-like Dutch Iris, Bulbous

Graceful flowers in July for garden decoration and cutting.

A glorious display of orchid-like, graceful flowers may be had in July if you plant bulbs of these beautiful iris in the fall in well-drained, sandy loam, 3 to 4 in. deep and 6 in. apart. In cold climates, mulch ground well after it is frozen. It is their nature to root early and often make top growth in December. Beautiful in the garden; highly prized for cutting and last a long time when put in water. Valuable for greenhouse forcing. If you live in Florida, any of the Gulf States, Texas or New Mexico, bulbs planted in late fall should produce winter flowers. 18 to 24 in. tall.

*In the descriptions we refer to standards and falls—the standards are the inner, erect segments; the falls are the outer, reflexed segments.*

## Showy Anemone coronaria

Showy single, semi-double and double flowers of many colors.

Neat, compact plants with long, stiff-stemmed, showy flowers in many charming colors, such as blue, rose, scarlet, white, etc. Bloom in May and June. Plant bulbs 3 in. deep and 6 in. apart in a cool, moist, but well-drained soil. Require winter protection north of Washington, D. C. In northern states, or in any cold section, we do not advise outdoor fall planting; it is better to wait until spring and treat as annuals or dig and store roots over the winter. In southern states, fall planting is best. Fine for pot culture, borders and rock gardens. Ideal for cutting. 1 ft. tall.

**7642 Blue Poppy** Lovely, large, single poppy-like flowers in various shades of blue. Attractive in the garden or as cut flowers. The large blooms often measure 3 in. across.  
12 for \$1.25; 100 for \$8.00

**7643 De Caen, Poppy Flowered** Large, single flowers in a great variety of bright colors with white, scarlet and shades of blue predominating; many are beautifully ringed or zoned.  
12 for \$1.25; 100 for \$8.00

**7644 His Excellency** Poppy-like single blooms of brilliant scarlet set off by a glistening silvery white base in contrast to a showy blue-black center. Flowers are quite large and showy.  
12 for \$1.25; 100 for \$8.00

**7645 St. Brigid** An extra choice mixture of semi-double and double blooms in a wonderful array of rich and brilliant colors; some selfs, others of more than one color, with many zoned.  
12 for \$1.25; 100 for \$8.00

**7645 Anemone coronaria, St. Brigid**  
12 for \$1.25; 25 for \$2.00

## Tecolote Giant Ranunculus

The largest and most magnificent strain ever offered.

**7653 Special Blend** Giant double and semi-double flowers, 3 in. and more across, are freely borne on strong stems, 12 to 15 in. long. Our mixture contains a wonderful range of colors—yellows, from straw to deep golden yellow; all shades of red; orange; pink; many ringed and tipped with a deeper color. Do best in a shady location and in moderately rich soil. Fine for cutting. Not reliably hardy north of Washington, D. C., except in warm, sheltered locations. Splendid for growing in frames or pots. # Burpee's Early Dutch Crocus

Flowers on this page bloom in March and April. All are hardy.

Bloom in early March and will grow in many places—in the lawn, flower borders, rock gardens, edge of shrubs, on the slopes of terraces, in sun or shade, and even under trees. For showy effect, plant bulbs 3 to 4 in. apart, 2 in. deep. To avoid formal arrangements when planting in the lawn, scatter the bulbs and plant them where they fall. In borders, double rows 6 in. apart with the bulbs spaced 3 in. apart in each row are very showy; such ribbon arrangements are most striking. Well-drained, fairly rich soil will give the best results.

Indoors, plant 8 to 10 bulbs 1 in. deep, 2 in. apart, in a 6-in. container using light sandy soil. Make several plantings for a longer blooming period. Complete instructions will be found on each package of bulbs.

# Burpee's Hardy Garden Lilies

Magnificent blooms in variety of colors from June through September.

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant.

All varieties offered are highly decorative in the garden border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend hardy lily bulbs for house culture; for this purpose, we suggest you plant the Croft Easter Lilies offered on the opposite page which also may be grown successfully outdoors in sections of the country where the winters are mild.

## CANDIDUM—(Madonna or St. Joseph's Lily)

Waxy white, sweet-scented, and broadly funnel-shaped flowers with yellow anthers are freely produced during June and early July atop strong stems 2 to 4 ft. tall. Very popular lily and it is most easily grown. It likes a location with full sun, but will endure light shade.

## DELIVERY OF HARDY GARDEN LILY BULBS

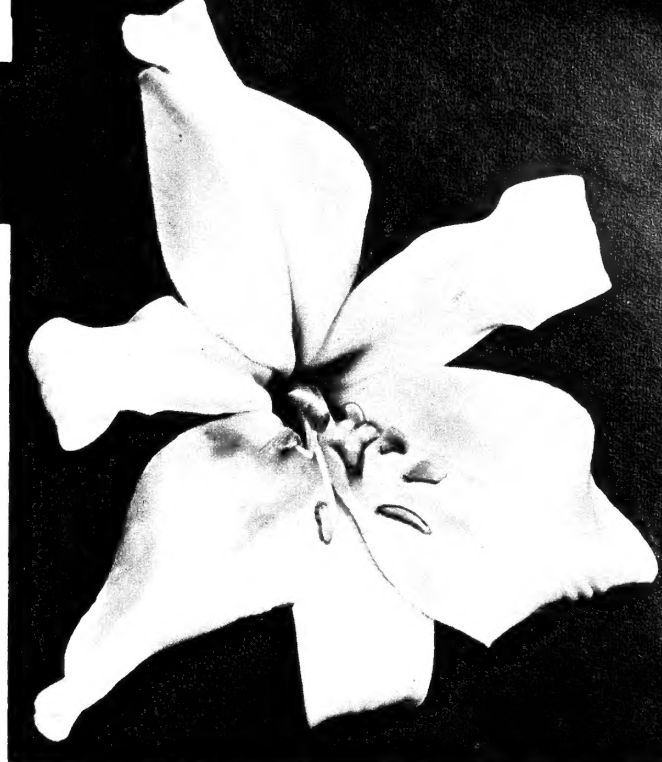

Hardy Garden Lilies are sent you in the fall just as soon as they are thoroughly cured and in the proper condition for planting. Some varieties will not be ready until November or early December. Plant them in the garden as soon as possible after they are received. If you live in a locality where the soil freezes early, we suggest that you cover the ground with manure, leaves, straw, etc., to prevent it from freezing. When lily bulbs arrive, remove covering and plant them immediately. Do not put the covering back over the bulbs until after the ground has frozen hard. The purpose of the covering is to keep the ground frozen so that alternate freezings and thawings will not injure root growth during the winter. Remove covering in spring after danger of frost has passed.

### Hole-in-one Planter

Plant setter and bulb planter. This handy tool makes a hole in one operation. Merely cut the tool into the soil, remove it with a slight twisting motion and the soil comes with it, leaving a clean hole in which plants or bulbs may be set.

Use a 5- or 6-in. pot; place bulb loosely in rich, porous soil so that it is barely covered and the soil gently but firmly set. Keep in a cool, dark but airy place, free from frost, until bulbs are well rooted; afterward bring to the light and grow on in a temperature of not more than 60° F. Ideal garden subject in frost-free locations. In other sections, after blooming in the house, they may be planted outdoors for late summer bloom.

## Burpee's Lawn Grass Seed for Fall Sowing
